

MERCADOS

Agua a presión

CARACTERÍSTICAS

MAYOR HERMETICIDAD

Las conexiones PEAD de pared sólida e interior liso segmentadas, puede ser unidas por termofusión a tope y por electrofusión, métodos con los cuales se consigue una unión monolítica más resistente que la tubería misma, son 100% herméticas.

FACILIDAD DE INSTALACIÓN

Las conexiones PEAD de pared sólida e interior liso son ligeras en peso, adaptándose a terrenos irregulares y soportando cargas dinámicas, lo que conlleva a su facilidad de instalación de bajo costo.

PROPIEDADES SUPERIORES

Presentan propiedades mecánicas superiores como dureza, resistencia a la tensión, aplastamiento y abrasión.

FABRICADAS CON TUBERÍA DE CALIDAD

Conexiones fabricadas con tubería PEAD lisa Hidráulica PTM, que cumple con los mas altos estándares de calidad y certificaciones.

CERTIFICACIONES Y CUMPLIMIENTO

NOM 001 CONAGUA-2011 NMX-E-018-CNCP-2012 ASTM D3350

MATERIA PRIMA

Fabricada con resina bimodal Certificada **PE4710** o **PE 100**

Probada en cumplimiento con las Normas correspondientes en laboratorio acreditado por la EMA.
